

CMS 356

CMS 356: 6 Phase Current + 4 Phase Voltage Amplifier

The CMS 356 is a voltage and current amplifier for analog low-level signals provided by a CMC test set or by any other signal source, such as a digital real-time power system simulator. When used in combination with a CMC test set, the amplifier extends the capabilities of the test set to provide additional output channels and higher amplitudes.

The high-amplitude and high-power current outputs make it equally suitable for testing modern numerical relays as well as high-burden electromechanical relays. The outputs of the voltage amplifier and the current amplifier are galvanically separated from each other and also from mains. Configuration and monitoring of the device status of the CMS 356 amplifier can be performed via the easy-to-use web interface.

Key features:

- > Six analog low-level inputs with selectable range (± 7.071 Vpk or ± 10 Vpk)
- > Numerous output configurations, for example, 3×300 V + 3×64 A or 6×32 A
- > Calculation and output of residual voltage and current
- > Parallel connection of several CMS 356 units for even higher current amplitudes
- > All current and voltage outputs are fully overload and short circuit proof
- > Protection against voltage transient signal and over temperature

Acoustics – noise emission	ISO 7779
Idle – full load	47 – 55 dB(A)
Safety standards, electromagnetic compatibility	
EMC	The product adheres to the electromagnetic compatibility (EMC) Directive 2014/30/EU (CE conform).
International	IEC 61326-1; IEC 61000-4-6; IEC 61000-3-2/3
USA	FCC Subpart B of Part 15 Class A
Safety	The product adheres to the low voltage Directive 2014/35/EU (CE conform).
International / USA	IEC 61010-1 / UL 61010-1
Canada	CAN/CSA-C22.2 No 61010-1

Miscellaneous	
Weight	16.3 kg (35.9 lb)
Dimensions (W x H x D, without handle)	450 x 145 x 390 mm (17.7 x 5.7 x 15.4 in)
PC connection	Two Ethernet ports: 10/100/1000 Base-TX
Signal indication (LED)	> 42 V for voltage and current outputs
Status LEDs	For each amplifier output to indicate hardware status (e.g. overload condition)
Connection to ground (earth)	4 mm (0.16 in) banana socket (rear side)
Hardware diagnostics	Self diagnostics upon each start-up
Galvanically separated groups	The following groups are galvanically separated from each other: mains, voltage amplifier output, current amplifier group A/B
Protection	All current and voltage outputs are fully overload and short circuit proof and protected against external voltage transient signals and over temperature
Certifications

¹ For current outputs amplitude derating at > 380 Hz

² Rload: 0 ... 0.5 Ω

³ For line input voltages below 230 V, a derating of the simultaneously available sum output power of the voltage/current amplifiers will occur
All other technical specifications (e.g. the maximum output power of a single amplifier) are not affected

⁴ For an operational temperature above +30 °C (+86 °F) a duty cycle of down to 50 % may apply
